

NETFLIX

Open IIT Data Analytics

Team 5

OVERVIEW

Netflix, as the world’s leading streaming platform with over 230M+ global subscribers, manages one of the largest and most diverse content libraries in the entertainment industry. With thousands of movies and TV shows spanning multiple countries, genres, and languages, understanding catalogue behavior is crucial for competitive strategy. This project focuses on uncovering patterns in Netflix’s content acquisition, release dynamics, global footprint, and genre evolution.

Why This Analysis Matters

Predicting future investment patterns

By analyzing temporal growth, , and the rise of originals, we can forecast where Netflix is likely to allocate budget , whether toward regional content, or high-performing genres.

Identifying emerging viewer trends

Patterns in genre growth, country-wise content, and seasonal spikes allow Netflix to detect shifts in audience preferences.

Crafting content portfolio strategies

Insights from catalog composition and performance trends help determine the ideal mix of movies, TV shows, & content to maximize engagement and retention.

Data-driven decision-making

With measurable metrics like time-lag, yearly additions, and originals share, content teams can make informed choices on what to acquire, for maximum impact.

Problem Statement

Netflix’s rapidly expanding across movies, TV shows, genres. However, understanding how this content evolves over time,its growth patterns and strategic shifts is critical. This P.S. is about analyzing the Netflix catalog to uncover key trends, temporal behaviors, and inflection points that shape platform decisions.

Objective

The objective is to analyze Netflix’s catalog to understand how its content strategy has evolved across composition, temporal trends, genres, geography. The goal is to uncover insights explaining what Netflix adds, when, from where, and why.

Netflix Added 22M Subs in 2024 So Far, the Most Since 2020

Netflix’s quarterly net subscriber additions

EDA

Uncovers content patterns, distributions, and hidden relationships across the entire Netflix catalog.

KPIs KRIs

Monitors strategic performance indicators, identifies emerging risks in content operations

STATISTICAL TESTING

Provides quantitative metrics to validate trends, measure growth.

STRATEGY

Transforms analytical insights into actionable decisions guiding Netflix’s long-term content direction.

1

Netflix Catalog & Strategic Evolution

- » **Transformation to Originals:** Netflix transitioned from a licensed-content platform to an original content powerhouse, with Originals/Exclusives accounting for over 50% of the U.S. catalog by 2022. This strategic pivot, beginning around 2013, significantly altered its competitive position and allowed greater global differentiation.
- » **Catalog Size & Composition:** The catalog consists of over 8,800 titles (2022 sample), with movies dominating (70–75%) but TV shows rapidly rising in both volume and audience engagement since 2017. TV series and regional productions now drive long-term retention.
- » **Ratings & Audience Focus:** The majority of content is aimed at mature viewers (TV-MA and TV-14 together make up 60%), although there’s a deliberate push post-2019 to broaden into family-friendly fare, particularly in Asian markets.
- » **Genre Concentration:** Drama and comedy remain core genres, but post-2018, growth in regional and crime series, international originals, and localized content is pronounced.

2

Content Growth, Globalization, and Strategic Inflection

- » **Explosive Growth (2016–2019):** Content additions surged, especially TV shows, aligning with Netflix’s global expansion and the rise of high-retention originals. Additions peaked in 2019, establishing Netflix as a top global producer/acquirer.
- » **Inflection Points:** Key years include 2013 (originals begin), 2015 (international expansion), 2020 (pandemic-driven spike), and post-2022 (shift to retention, franchise/region-focused scaling).
- » **Regional Footprint:** The U.S. remains the largest contributor but is declining in proportional dominance. India, South Korea, Spain, and Japan are now major production hubs, while multilingual and localized content is central to Netflix’s growth model.
- » **Category & Regional Dominance:** Netflix employs both “Prestige Hub” (e.g., UK, Spain) and “Category Hub” (e.g., India’s children’s animation, Mexican stand-up comedy) strategies. The latter, focused on owning an entire content ecosystem, is highly defensible and scalable.
- » **Market-Specific Plays:** Success in Indian children’s content and Mexican stand-up is driving the next “Niche-at-Scale” playbook targeting Nollywood (African dramas) and European music docs.

3

Content Timing, Audience Segmentation & Innovation

- » **Temporal Trends:** Sharp content growth post-2015; stabilization after 2020. Major content drops are strategically timed for Q4 (holidays) and mid-year (summer), maximizing engagement.
- » **Release Time-Lag:** Netflix reduces time-lag between a title’s release and its arrival on the platform, especially for Originals, fueling subscriber acquisition and retention. Median lag is now less than 1 year for new TV shows.
- » **Event vs. Library vs. Category Content:** Netflix’s three-pronged content model includes event-driven blockbusters for acquisition, deep library content for churn reduction, and ecosystem-level category ownership for loyalty.
- » **Need-State Targeting:** User segmentation focuses on “event-seekers” (newness, trending) with zero-lag releases, and “comfort-seekers” (nostalgia, library content) to keep at-risk users engaged.
- » **Audience, Diversity, and Data:** Expanding non-English and regional originals is vital. New performance KPIs focus on niche cohort churn, local-first viewership, diaspora engagement, and lifetime value (LTV) to measure true impact.

4

Talent, Collaboration, Market Differentiation

- » **Prolific Contributors:** Netflix’s top directors and actors hail from diverse regions, especially India, Mexico, and non-Western markets, anchoring key content hubs and genres (e.g., Rajiv Chilaka for Indian children’s content).
- » **Collaboration Patterns:** High-frequency collaborations in stand-up, animation, and Bollywood drive volume and deep catalog engagement.
- » **Hybrid Content Acquisition:** Netflix blends Hollywood-style prestige deals with high-volume, cost-effective creator ecosystems to achieve library depth and regional loyalty.
- » **Defensible Moat via Niche Ownership:** Rather than buying single hits, Netflix aims to own entire creator ecosystems/niches—building an unassailable competitive moat and platform loyalty.
- » **Data-Driven Strategy:** All strategic recommendations (e.g., greenlighting new genre/category expansion) are tied to data—focusing on reducing churn and increasing LTV, not just headline subscriber numbers.

Feature	Movies	TV Shows
Catalog Share	~70–75%	~25–30%
Format	Single, feature-length	Episodic, serialized
Duration	90–110 minutes	1–3 seasons
Top Genres	Drama, Comedy, Action, Documentary	Crime, International, Reality, Thriller
Growth Phase	Consistent since 2015	Rapid post-2017
Audience Base	Global, General	Younger, Regional
Engagement	One-time view	Long-term retention
Content Model	Licensed + Originals	Originals-focused
Regional Focus	U.S., India, U.K.	Korea, Spain, India
Examples	The Irishman, Extraction	Stranger Things, Squid Game

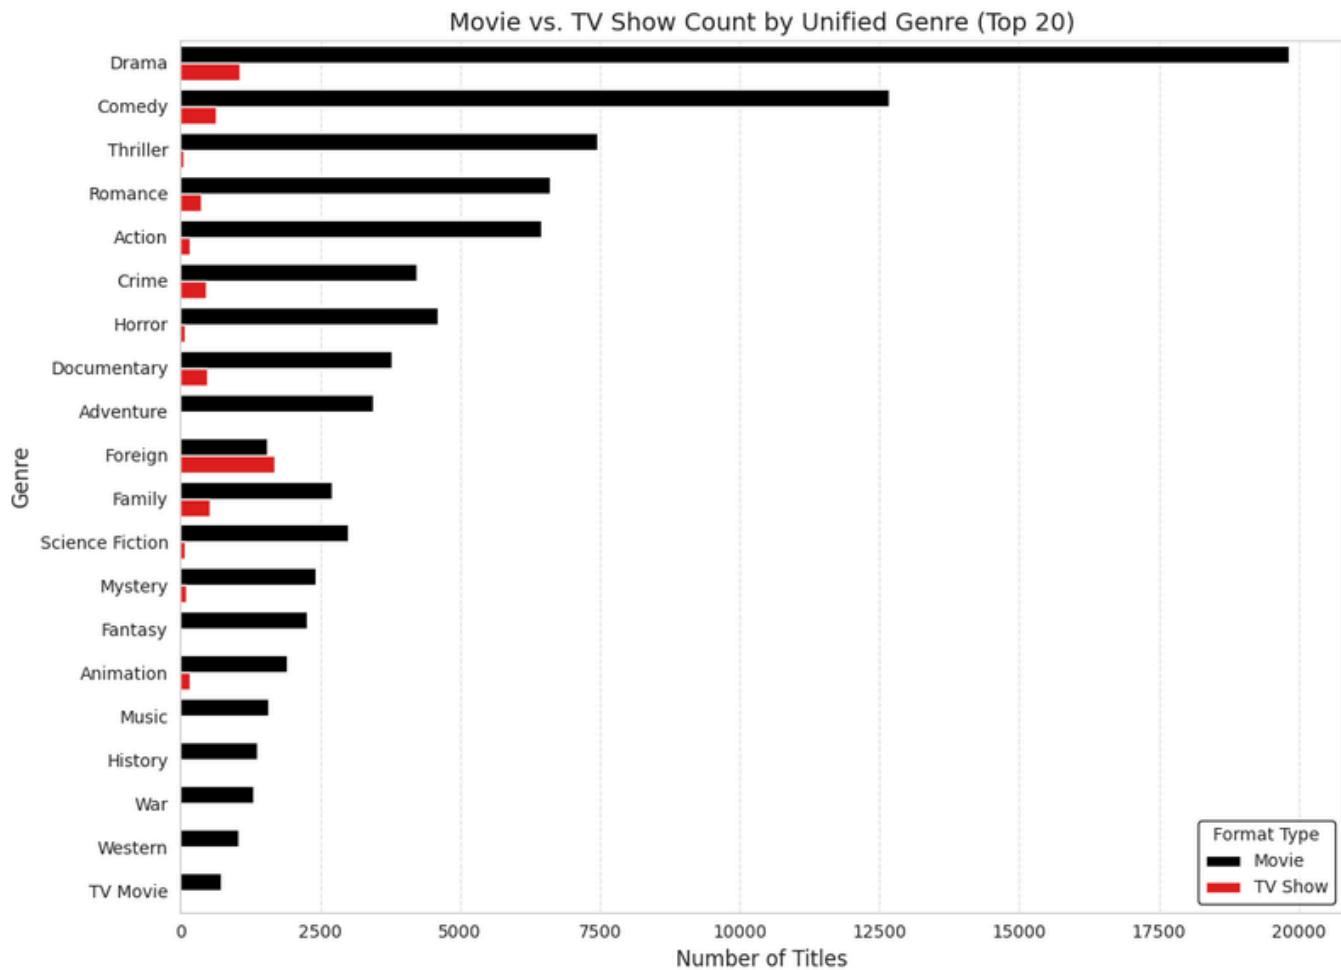

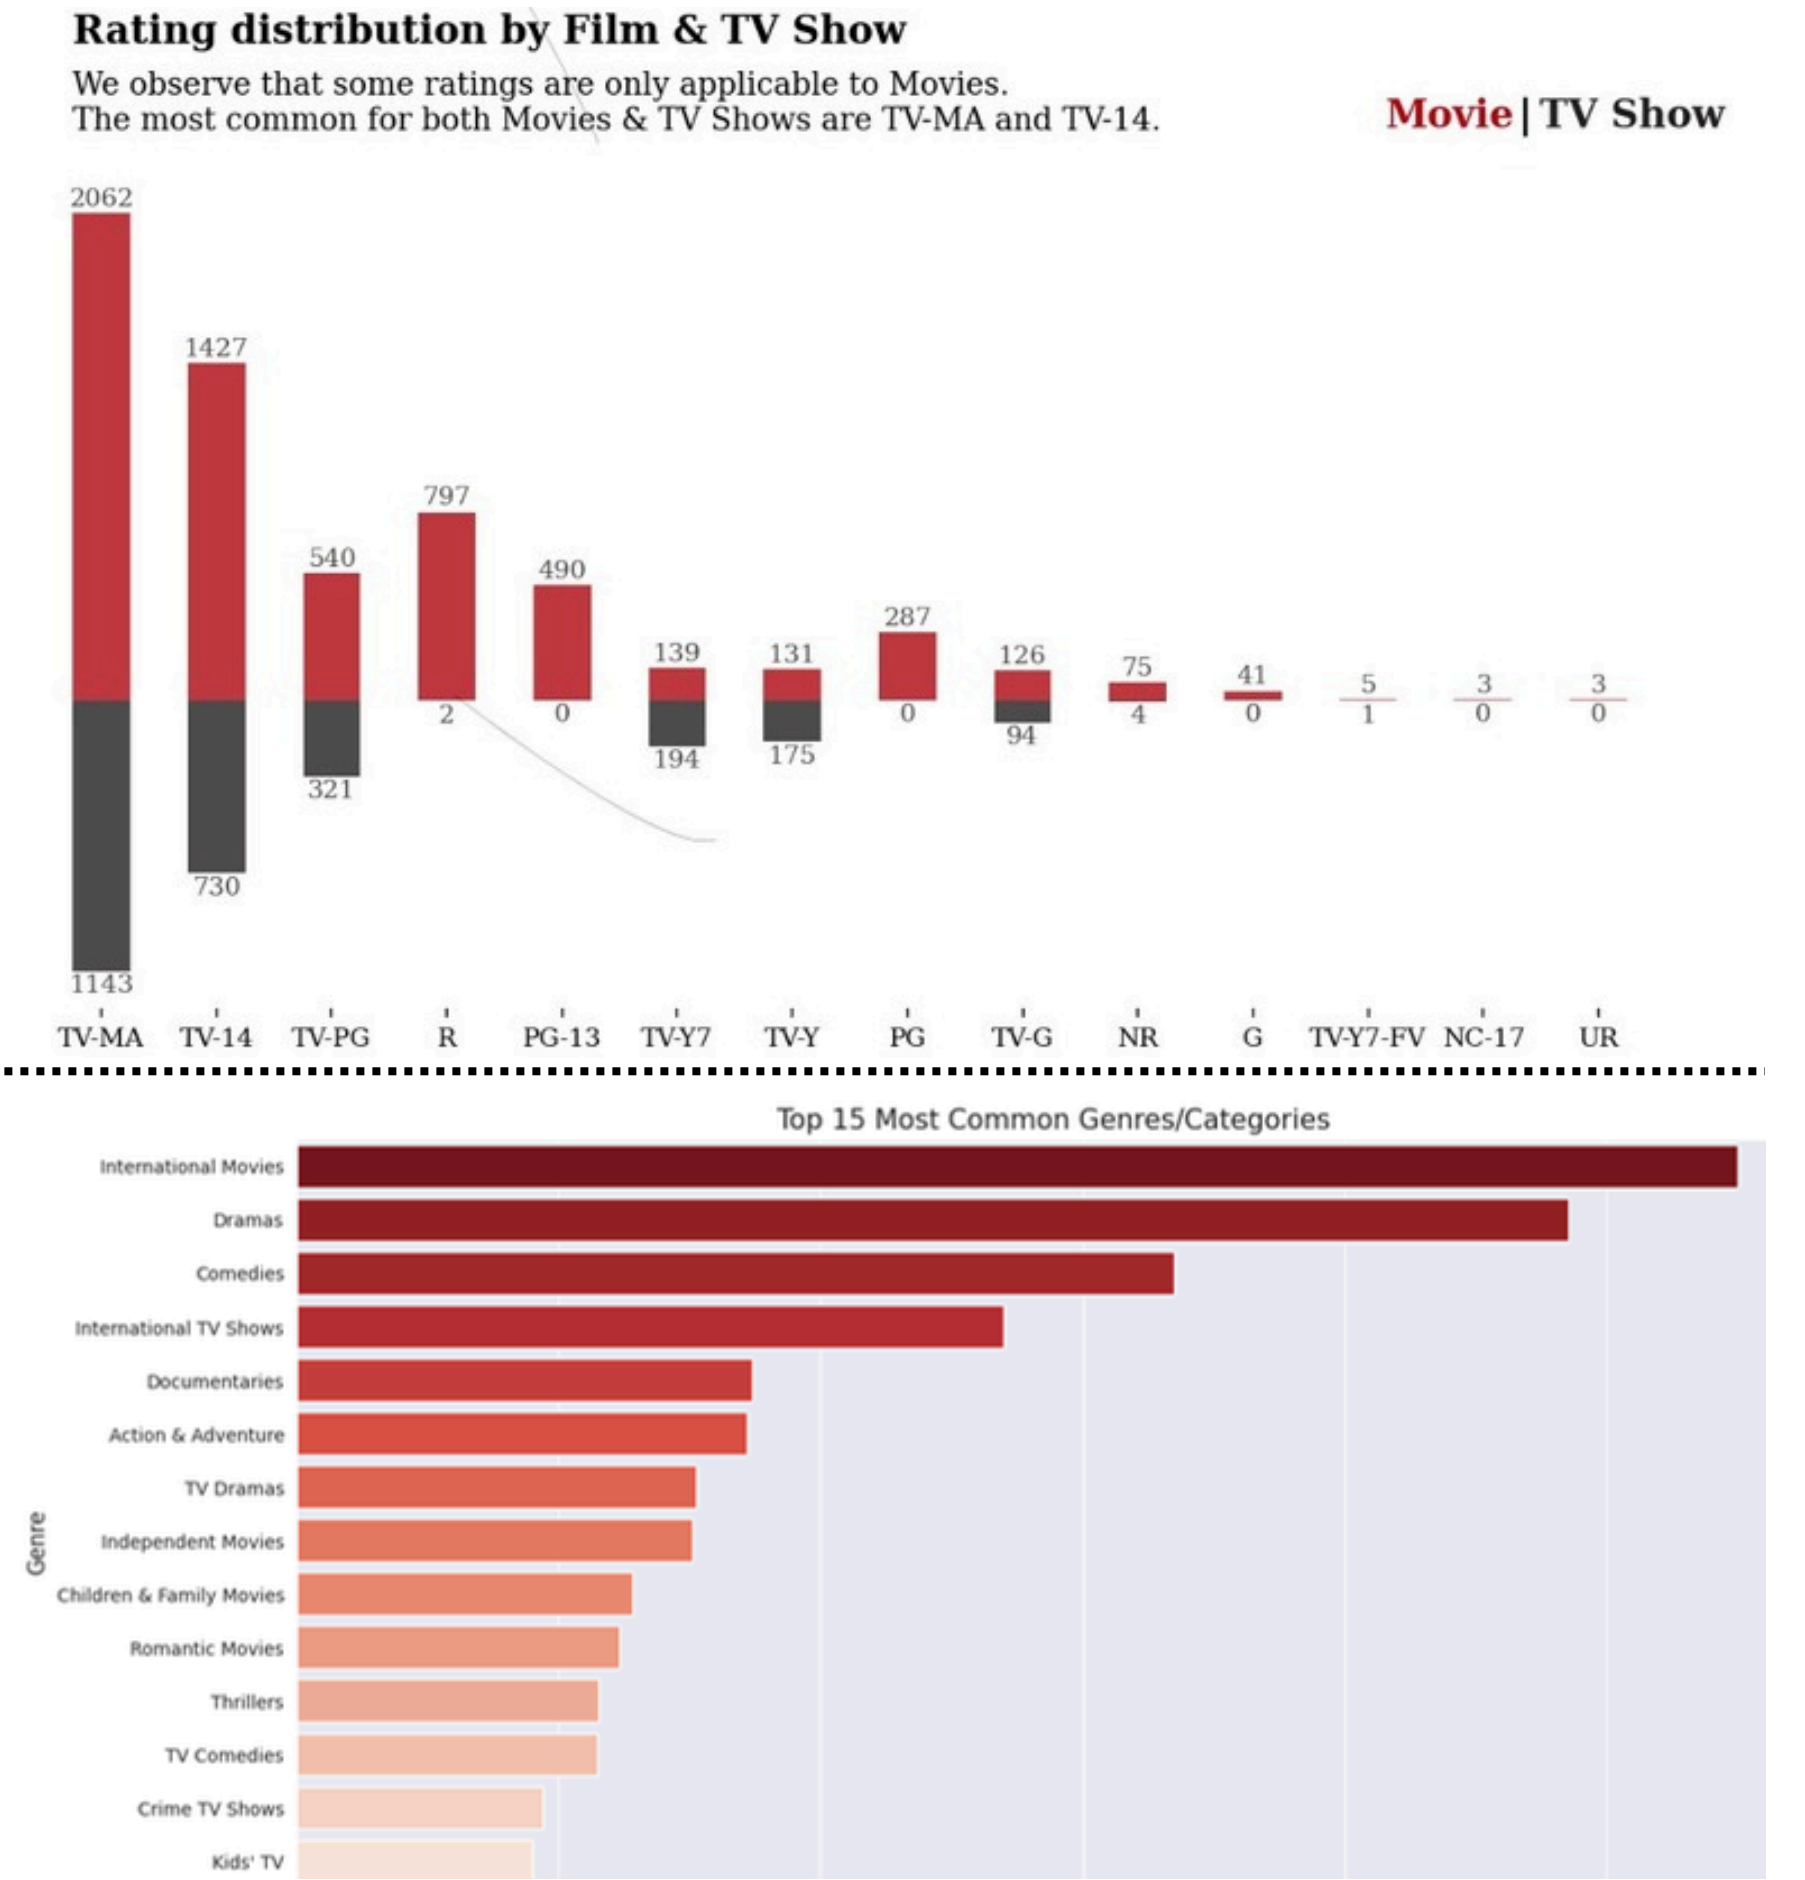

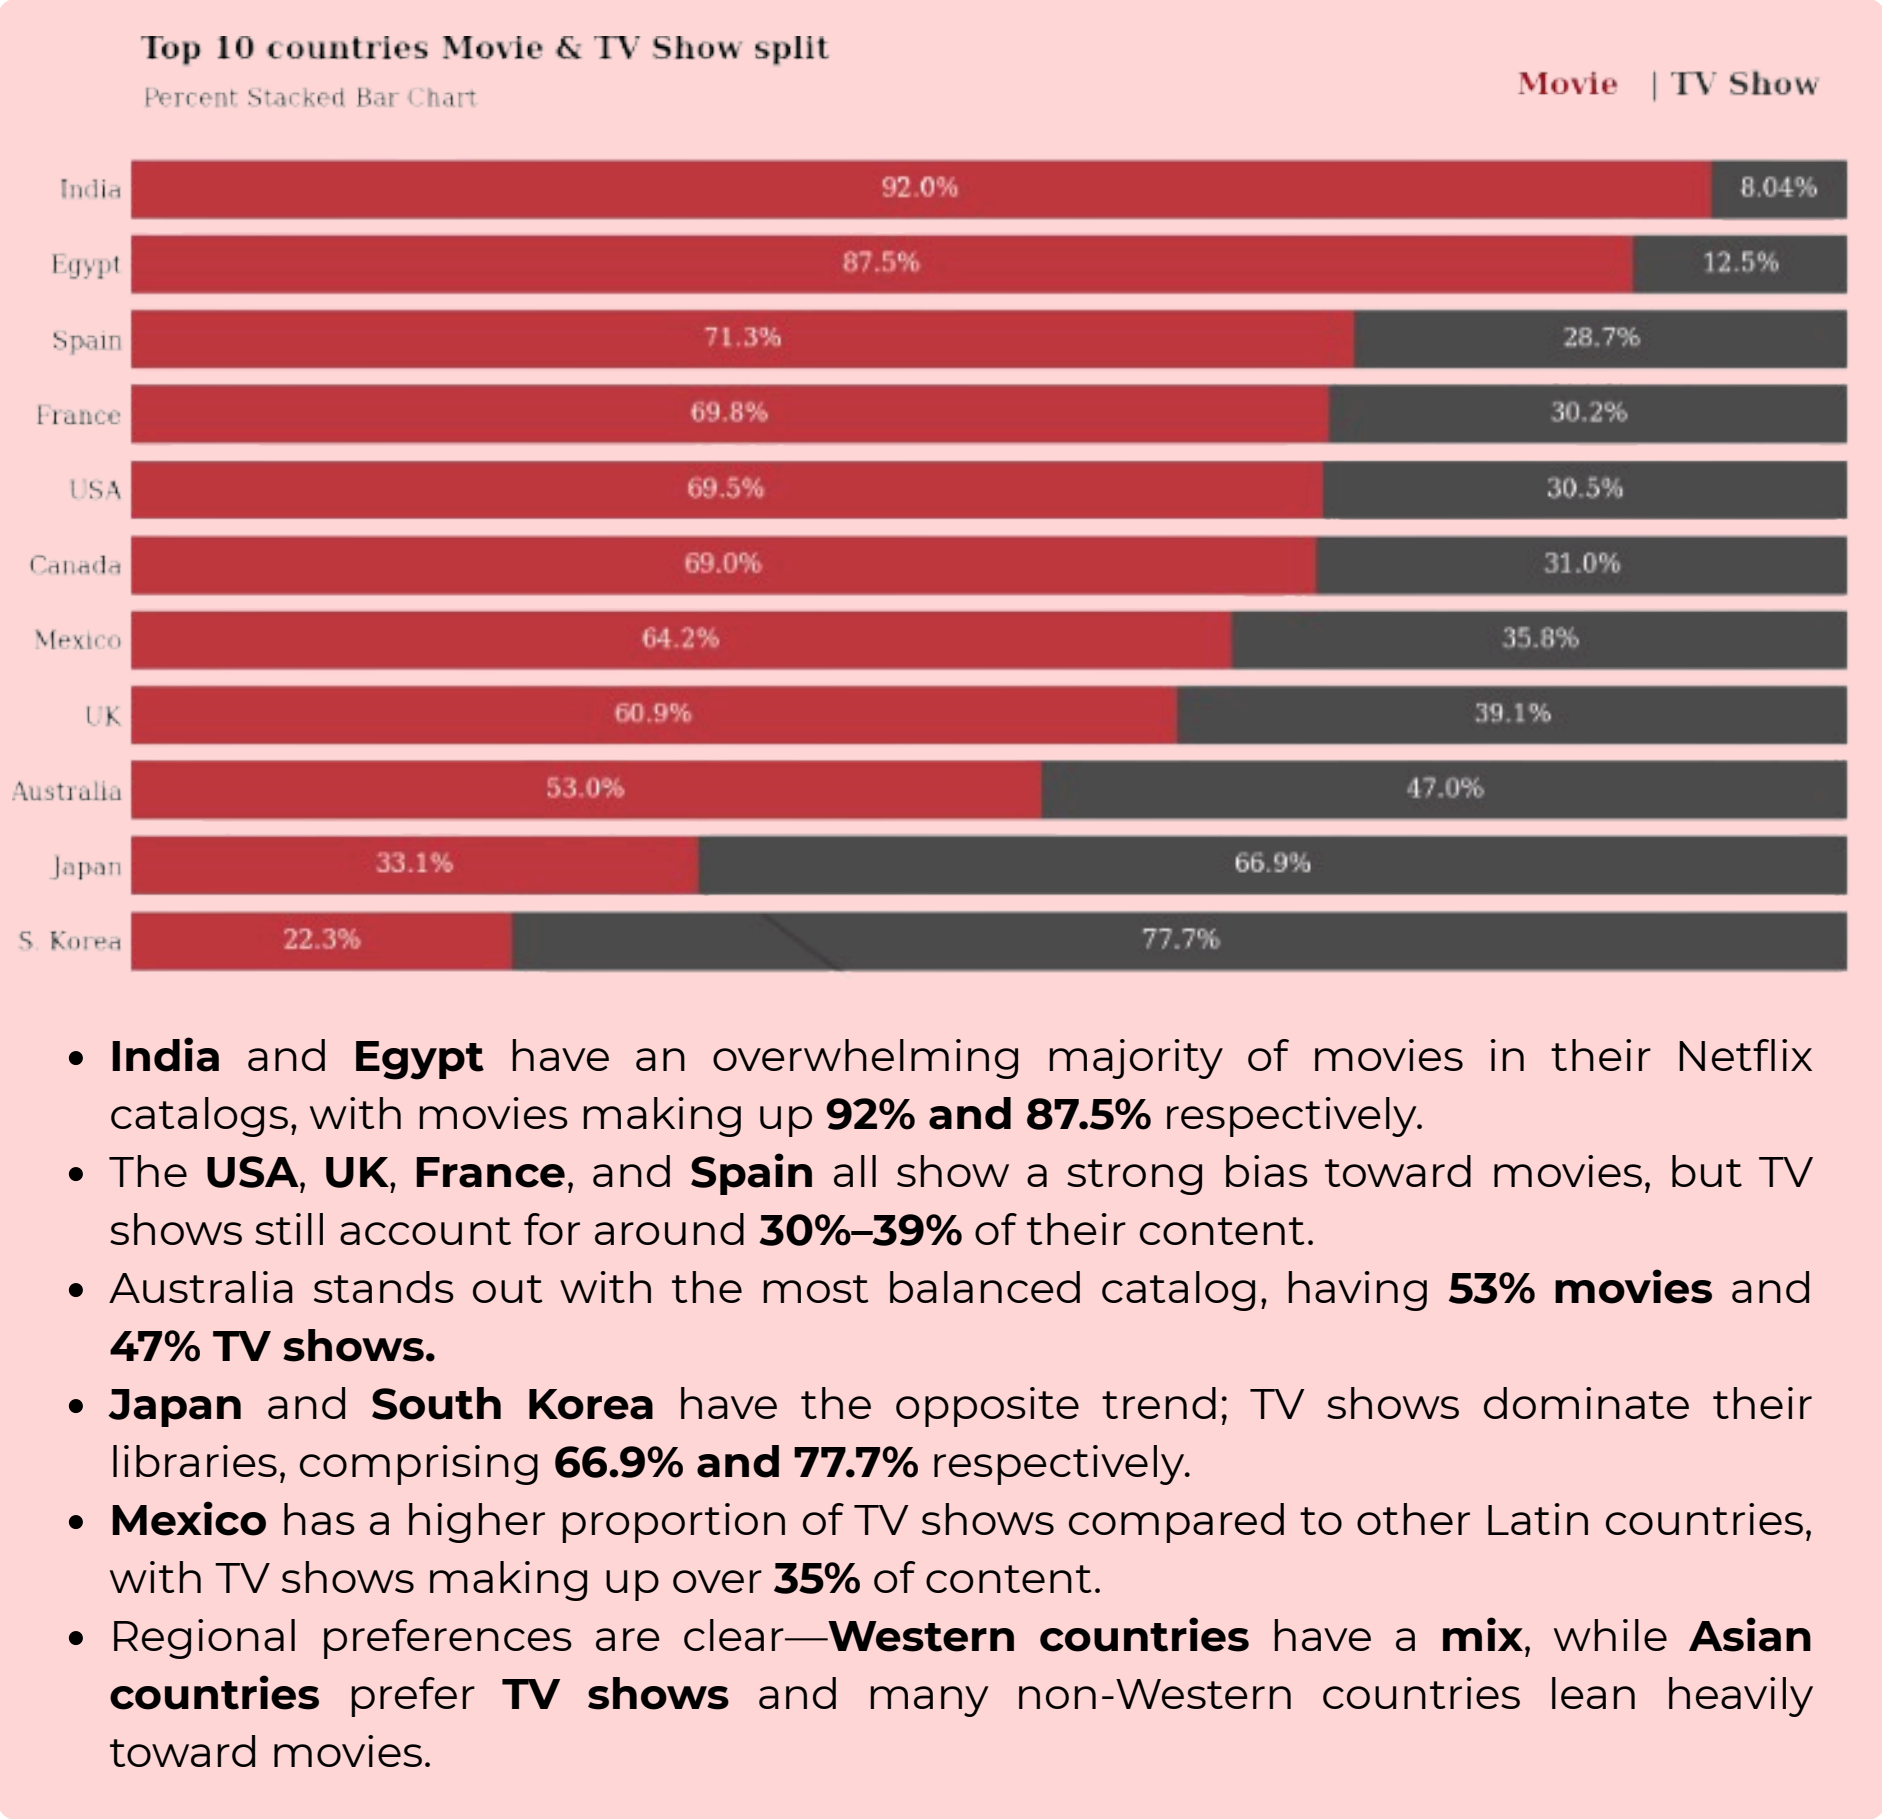

- Most Netflix titles are rated "**TV-MA**," reflecting a strong focus on content for mature audiences.
- "**TV-14**" and similar teen/adult ratings comprise a substantial share, supporting diverse viewing across **older age** groups.
- Family and children's ratings ("**TV-Y**", "**TV-Y7**", "**PG**", "**G**") make up a smaller portion, highlighting an opportunity for **growth** in youth and family programming.
- The presence of "R", "**PG-13**", and rarer or niche ratings shows Netflix's appeal to a wide and varied viewer base.
- Expanding **family** and youth content could enhance **engagement** and **retention** across more **household** segments.

Content Type Distribution: Movies vs. TV Shows

- **Drama** is by far the most **dominant** genre in Netflix's catalog, with a significant lead over all other genres for both **movies and TV shows**.
- Comedy and thriller genres also feature very prominently, with **comedy** nearly matching **drama** in terms of total title count, reflecting strong **viewer demand** for these categories.
- The majority of popular genres (like **romance, action, crime, and horror**) overwhelmingly consist of **movies**, while TV shows make up a smaller but notable fraction in each genre.
- Certain genres such as "**Adventure**," "**Foreign**," and "**Family**" show a higher share of TV shows relative to their total, especially when compared to other categories.
- Niche genres like **music, history, war, western, and "TV movie"** have the lowest number of titles, underscoring clear opportunities for category **expansion**.
- Overall, Netflix's catalog **demonstrates** strength in **classic** entertainment genres, with room to broaden offerings in **family-friendly** and specialized content areas.

Evolution of Netflix’s Content Strategy (Pre-2010 to Post-2020)

- **Pre-2010:** Limited licensed titles; small, niche catalog.
- **2010–2016:** Rapid content expansion and global reach.
- **2016–2019:** Explosive growth pivot to originals like Stranger Things.
- **Transformation:** Shift from distributor global content powerhouse.
- **2018–2020 Peak:** Record-high content additions; dominance in original TV.
- **Post-2020:** Growth stabilizes amid market saturation and rising competition.

Titles Added per Year — Strategic Inflection Points (Netflix Theme)

Netflix’s Strategic Transformation (2016–2021)

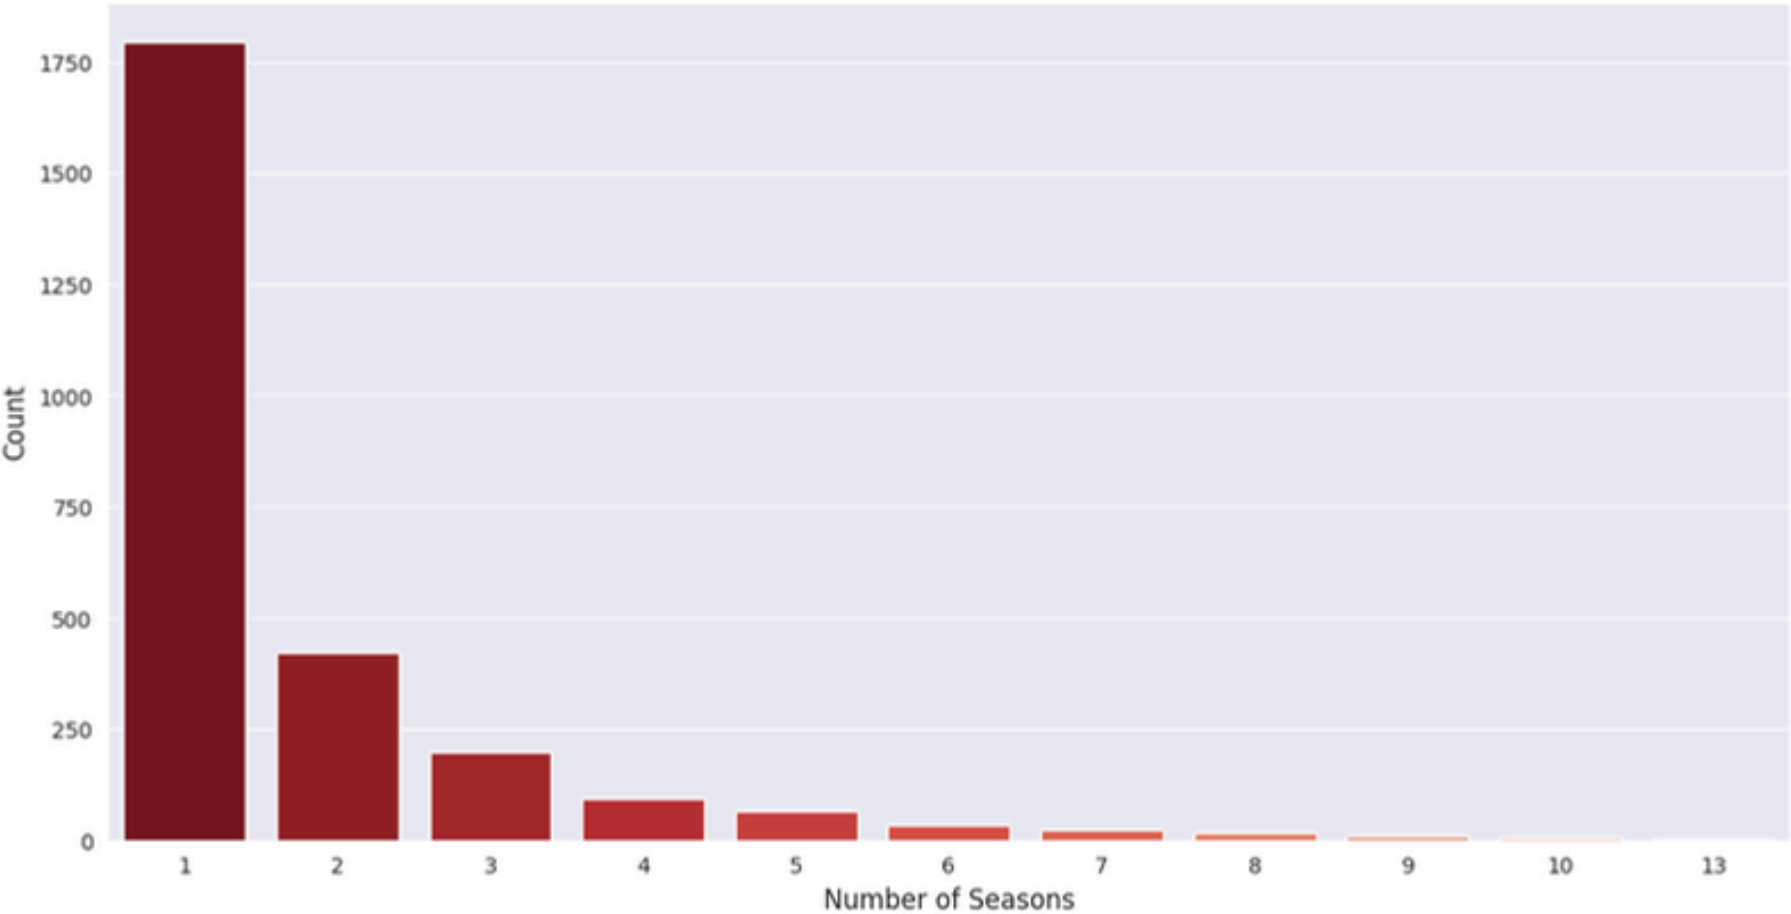

- **2016–2017:** Marked a major strategic inflection point for Netflix.
- **2019:** Content additions peaked, reflecting explosive growth.
- **2020–2021 Dip:** Slight decline due to COVID-19 disruptions or dataset limits.
- **Transformation:** Netflix evolved from a distributor to a global production powerhouse.
- **Key Driver:** Surge in TV show releases from 2016 onward.
- **Strategic Focus:** Emphasis on high-retention originals and long-term content ownership.

Netflix Movie Duration Distribution

- **Peak Range:** Most movies fall between 90–100 minutes, the ideal feature length.
- **Standard Benchmark:** 90 min marks the industry norm and Netflix’s core focus.
- **Long Films Rare:** Few titles exceed 120 minutes, showing limited long-format content.
- **Right-Skewed Curve:** Indicates dominance of shorter films with a small long-movie tail.
- **Strategic Focus:** Netflix prioritizes concise, high-engagement runtimes for viewer retention.

Distribution of TV Show Season Counts

TV Show Season Distribution: The One-Season Model

- **One-Season Dominance:** Over 60–70% of Netflix TV shows have only one season, revealing a deliberate short-run approach.
- **Test-and-Scale Model:** Netflix launches, measures, and renews selectively, expanding only shows that prove audience traction.
- **Data-Driven Decisions:** Renewals are guided by viewer engagement, completion rates, and retention metrics.
- **Risk Management:** This approach minimizes production costs and limits financial exposure on underperforming titles.
- **Selective Expansion:** Only high-performing shows transition into multi-season hits, reinforcing Netflix’s efficiency-first content strategy.

Reducing the time Lag Between Release and Streaming

- **Fast Turnaround:** Majority of titles drop within 0–2 years of release keeping the catalog fresh and current.
- **Recency Focus:** Sharp decline after 3 years shows Netflix’s bias for new, high-relevance content.
- **Strategic Shift:** Emphasis on quick acquisitions and originals to sustain constant buzz.
- **Viewer Advantage:** Short lags mean “latest hits, faster” driving engagement and loyalty.
- **Smart Nostalgia:** Older (5+ years) titles added selectively for classics and fan favorites only.

Thematic Trends in Netflix Storytelling

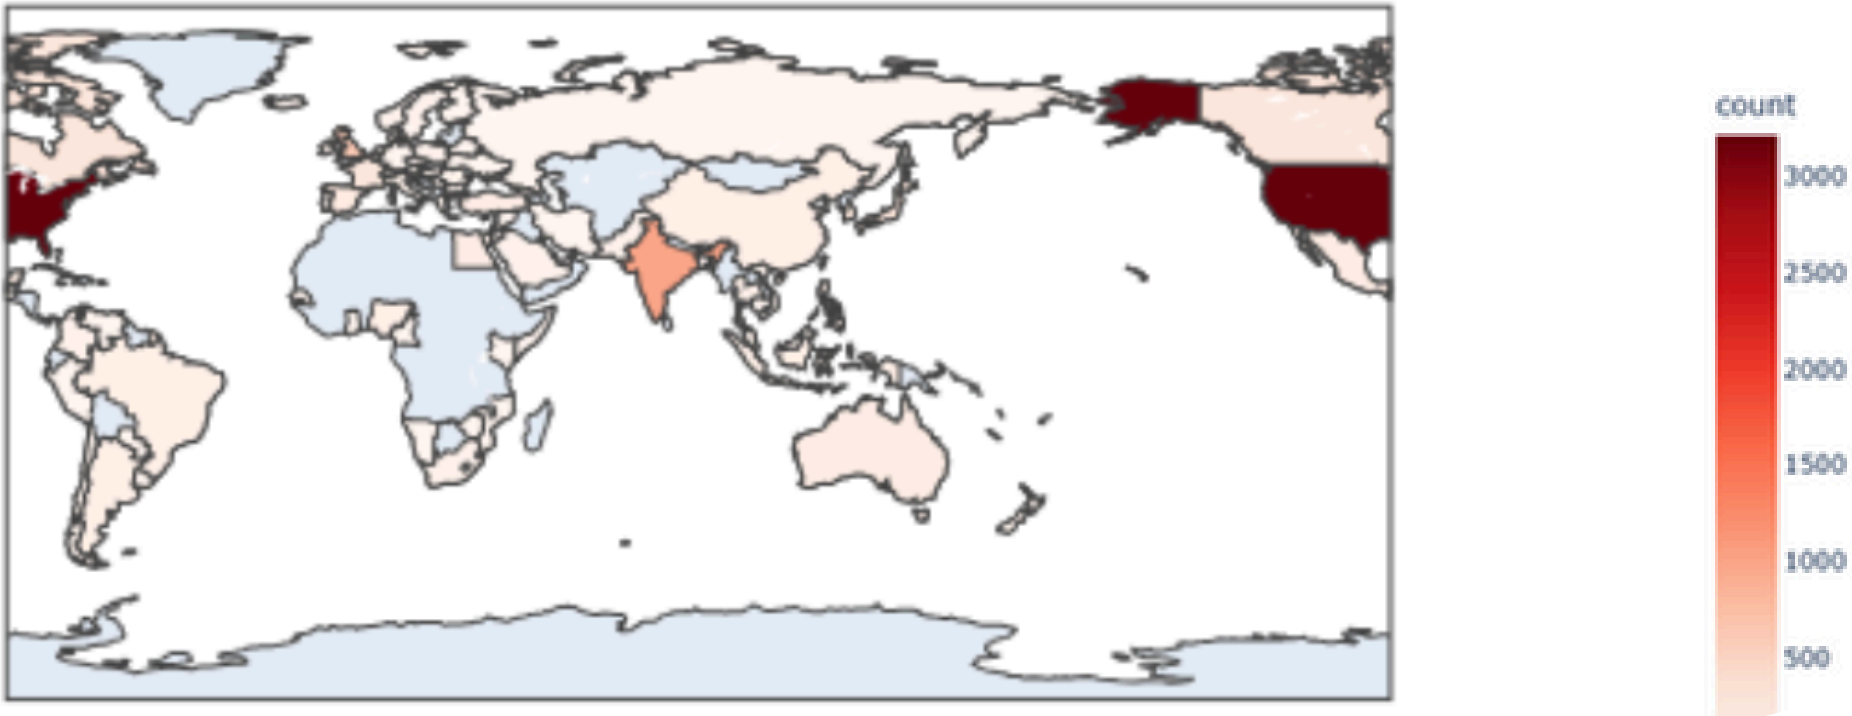

- Recurring phrases like “**year old**”, “**high school**,” and “**best friends**” reveal a strong youth and coming-of-age focus.
- Frequent terms such as “**based on true**” and “**real events**” emphasize realism and emotional storytelling.
- The rise of “**inspired by real events**” and “**true crime stories**” underscores the popularity of docu-dramas and crime narratives.
- Storylines blend relatable human themes with authentic backstories, broadening audience appeal.
- Overall, Netflix leverages emotional realism and familiar hooks to deepen viewer engagement.

OBJECTIVES

- Global content footprint
- Regional production hubs
- International expansion strategy
- Cultural diversity metrics
- Market-specific insights

Geographic Distribution of Content Production (based on first country listed)

Proportion of US vs. International Content Added Per Year

The US-Centric Global Library

Relying on high-cost, US-centric event content defines the brand but is **high-risk**, with front-loaded value. **High costs**, easy copying, and local content preference threaten sustainability.

The International Local Library

The Many-to-Many model uses local content and a mix of **high-cost** Prestige Plays and **low-cost** Volume Plays. The shift to Niche-at-Scale is the defensible long-tail strategy to reduce churn.

Top 5 Genres by Top 5 Producing Countries

Prestige Hub Model

Goal: Produce one high-cost "hit."
Risk: Binary success and bidding wars. Mitigation: Fewer, certain bets using data modeling.

Category Hub Model

Goal: Own a high-demand genre (Niche-at-Scale). **Risk:** Low (distributed across many titles).
Mitigation: Strong local M&A and fair, long-term creator deals.

Cultural Diversity Metrics

The "Old" Vanity Metrics- Total views, followers, sign-ups; look good, not actionable.
The "New" Strategic KPIs- Retention, churn, LTV; drive decisions, show real business value.

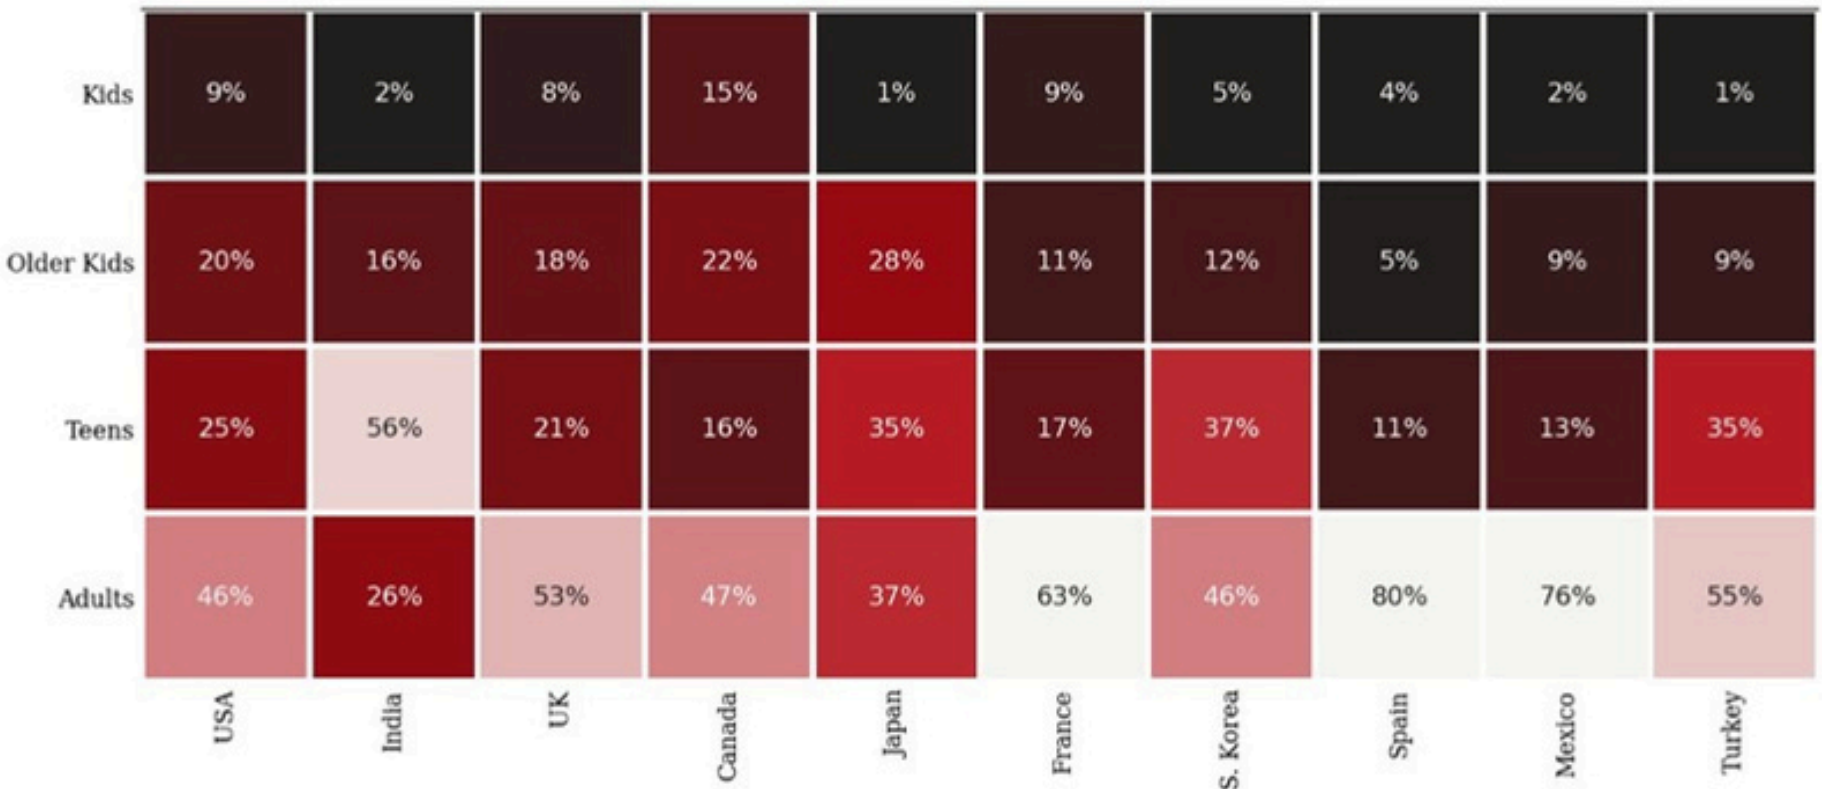

International Expansion Strategy

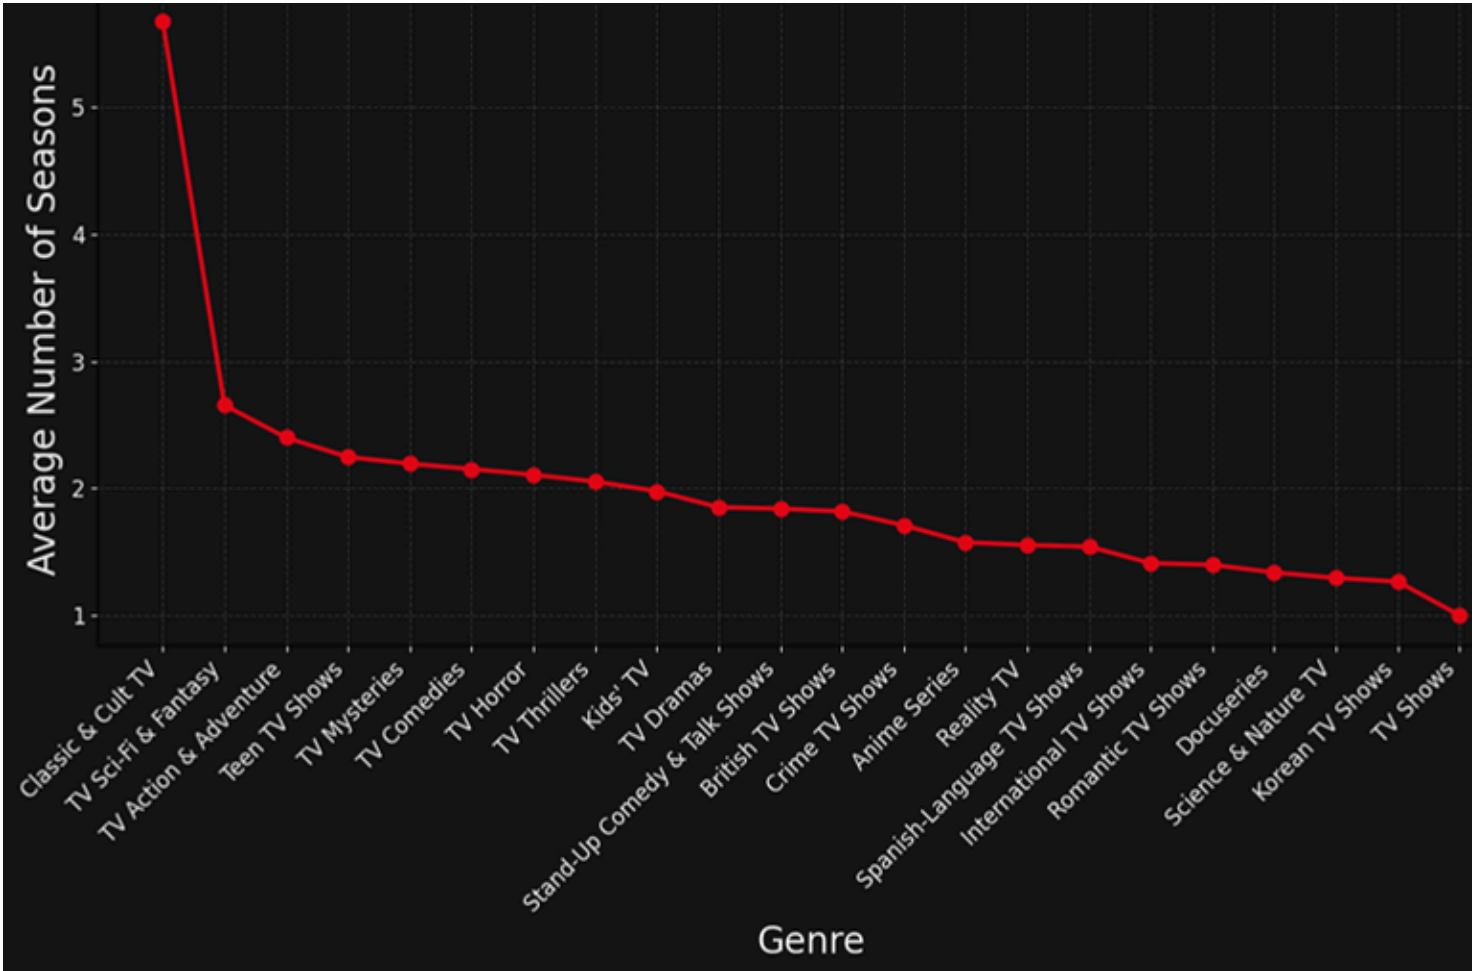

IDENTIFY: Use data to find the next high-value niche
ACQUIRE: Execute a "category buy." Market (Dual Track)

Target ages proportion of total content by country

Here we see interesting differences between countries. Most shows in India are targeted to teens, for instance.

STRATEGIC INSIGHT

Netflix’s **content strategy** is intentionally mature-focused, targeting **adult** and **young-adult** viewers while keeping Kids content in a separate, sandboxed profile. To sustain novelty, Netflix embraces genre innovation by blending categories like Dramedy or Sci-Fi Mystery to counter viewer fatigue and broaden appeal. Using a “**1-season appetizer**” model, experimental genres are tested with limited runs to reduce risk, while data-driven audience overlap analysis guides successful genre combinations.

The heatmap shows distinct audience targeting across genres:

- **Mature Genres:** Horror, Thriller, and TV Drama focus on TV-MA content.
- **Broad Appeal:** Comedy and Drama span TV-14 to TV-MA.
- **Niche:** Anime centers on TV-14 / TV-MA.
- **Family:** Kids & Family titles stay within TV-G, TV-Y, TV-PG ratings.

THE NEED FOR NOVELTY

To combat viewer fatigue with standard “**pure**” genres, category mixing is essential for creating “**newness**,” generating buzz, and standing out in a crowded market. Blending formats like Dramedy, Sci-Fi Mystery, or Historical Action offers the novelty subscribers crave and is a critical tool for differentiation.

DE-RISKING INNOVATION

Our innovation strategy will focus on injecting specialized, niche themes into proven, mainstream structures. To manage the financial exposure of this experimentation, we will adopt the “**1 Season**” appetizer model mentioned in our analysis. This involves greenlighting shorter, 10-episode seasons with clear performance gates for renewal, such as a 50% completion rate.

Key Points

- Portfolio focuses on mass-appeal genres like Drama and Unscripted, driving viewership and budget allocation.
- These genres serve as the main engine for audience acquisition.
- Catalog balances new releases (“**0-year lag**”) and deep library titles (“**5–10 year lag**”).
- New releases are marketed as “**must-see events**” to boost sign-ups, tracked by 28-day viewership.
- Library content is positioned as “**comfort viewing**” to enhance retention and reduce churn.
- Separate budgets are allocated for event marketing and ongoing library discovery.

Insights and Graphs

- **Mainstream Goal (Acquisition):**
Mass-market content (big-budget action, simple reality) is necessary for high-volume acquisition and generating large initial viewing spikes.
Success Metric: "First 28-Day Viewership" and "New Subscriber Acquisition."
- **Niche Goal (Retention):**
High-retention "anchor" shows—those with a loyal, even if small, "cult" following—are critical for reducing subscriber churn.
Success Metric: "Subscriber Churn Rate" among viewers and "Lifetime Value (LTV) of Cohort."

A 2x2 Matrix shows niche categories as high-loyalty anchors, while a Bar Chart reveals that niche viewers deliver higher retention and LTV despite smaller audiences.

Top 15 Most Common Genres/Categories

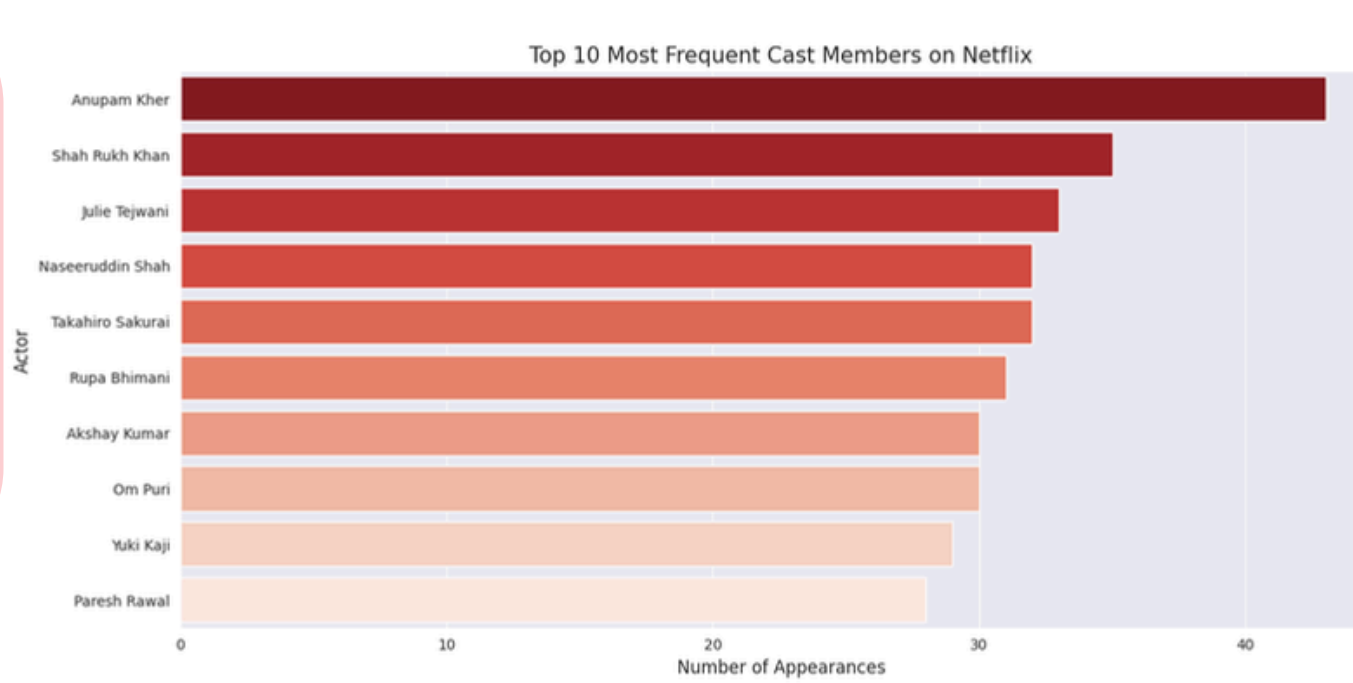

KEY CONTRIBUTORS TO THE NETFLIX CATALOG

Netflix’s catalog is shaped by a globally distributed network of creators, directors, production houses, and performers.

- US, India, UK, Japan, and South Korea emerge as the dominant production sources, contributing the largest share of titles.
- Certain creators/directors appear repeatedly, forming creative hubs that Netflix frequently collaborates with. These include notable contributors to genres like documentaries, stand-up comedy, and regional cinema.

COLLABORATION PATTERNS

Netflix’s rapid expansion is closely tied to its embrace of inclusive & internationally diverse talent pools, reflected in casting choices, production partnerships.

- The dataset shows representation from 120+ countries, highlighting Netflix’s commitment to global storytelling and diverse voices.
- Content features talent across continents, leading to the rise of non-English global hits (e.g., Korean, Spanish, and Indian originals).
- Diversity extends beyond geography: Gender diversity in casts and crews is noticeably higher in documentaries, dramas, and international films.

TALENT DIVERSITY

Celebrity-driven content remains a powerful growth lever for Netflix, influencing both subscriber attraction and content performance.

- Titles featuring globally recognized actors (e.g., Ryan Reynolds, Dwayne Johnson, Alia Bhatt, Song Joong-Ki) or established directors often correlate with higher initial viewership and trending behavior.
- Celebrity-led originals (e.g., Extraction, Red Notice, The Gray Man) function as global tentpole titles, pulling audiences from multiple regions simultaneously.

CELEBRITY CONTENT IMPACT

Celebrity-driven content remains a powerful growth lever for Netflix

- Titles featuring globally recognized actors (e.g., Ryan Reynolds, Dwayne Johnson, Alia Bhatt, Song Joong-Ki) or established directors often correlate with higher initial viewership and trending behavior.
- Celebrity-led originals (e.g., Extraction, Red Notice, The Gray Man) function as global tentpole titles, pulling audiences from multiple regions simultaneously.

NETFLIX

Why We Need a New Acquisition Strategy

- Move from chasing one-off “hits” to a diversified, goal-driven approach
- Align spend with business outcomes: Acquisition vs. Retention
- Stop renting hits — start owning categories

African “Nollywood” Dramas

- High-volume industry with massive, loyal following.
- **Highly fragmented** → Ideal for category ownership.
- Provides first-mover advantage and continental dominance.

Event Content - High-Profile, Fast Impact

- What it is: Brand-new, high-buzz global content (flagship series, blockbusters)
- Strategic Goal: **Dominate** cultural conversation & drive new subscriptions
- Why it Wins: Creates urgency ,boosts brand visibility
- **KPIs:** 28-day first watch count, total viewership, cost per subscriber, press mentions

Achieving Global Market Dominance

- Geographic **expansion** should be selective, not broad.
- Align each move with the "Niche-at-Scale" **model** for targeted growth.
- Focus on winning specific markets from within, rather than launching everywhere.

The Two-Goal Strategy

- Regional Dominance: Become the primary destination for regional content.
- Drive **local** subscriber growth and be seen as a “local” service.
- Global Crossover: Acquire authentic content that resonates with diaspora and global **audiences**.
- Example: A Nollywood fan in London is as valuable as one in Lagos.

STRATEGIES

European Electronic Music

- Geographic-cultural niche with global fanbase (**ages 18–35**).
- Mix of comfort content (live) & event content (music documentaries).
- Catalog and performance **ownership** can “own the genre.”

Identify the Next Niche (Key Criteria)

- Fragmented Creator Ecosystem: Many **independent** creators (not dominated by few studios).
- High Volume of Production: Mature industry with consistent output (e.g., **Nollywood**).
- Passionate Fanbase: Cult-like audience with strong social engagement.
- Low Cost-per-Hour (High ROI): Affordable **ecosystem** with strong returns.

“Need-State” Targeting

- Move beyond simple **demographics** like “Males 18–34.”
- Focus on why users watch — their content need-states, not just who they are.
- **Need-states** are more predictive of viewing behavior and churn risk

Need-State 1: The Event-Seeker (Newness)

Who They Are:

- Subscribers driven by “what’s new” and trending.
- Want to be part of the cultural conversation.
- Typically new or low-engagement users.

Strategy:

- Promote “0-lag” content as urgent, must-see events.
- Focus on acquisition and re-engagement.

UI/UX Recommendations:

- Massive homepage banners, “Trending Now,” “Top 10” sections.
- Targeted “New Release” emails and push notifications.
- Algorithm prioritizes discovery and freshness.

Data Insight - Linking Content to Need-States

- The “Content Lag” and “Anchor Show” analyses identify clear audience types.
- We have content for both newness and nostalgia — the key is differentiated marketing.
- Segmentation by **need-state = smarter** recommendations, higher retention.

Need-State 2: The Comfort-Seeker (Nostalgia)

Who They Are:

- Subscribers at risk of churning, or seeking familiarity.
- High re-watch frequency; value emotional comfort.

Strategy:

- Promote “5–10 lag” library content through nostalgia-driven campaigns.
- Serve as a churn-reduction tool with familiar shows.

UI/UX Recommendations:

- “Watch It Again” and “Because You Loved...” rows.
- Curated “Comfort Viewing” or “Easy Watch” collections.
- Algorithm prioritizes familiarity and emotional connection.

Data Acquisition

- Collected the Netflix Titles Dataset, containing structured metadata for 8k+ titles across movies and TV shows.
- Understood dataset scope: type, genre, country, cast, creators, ratings, release year, and Netflix date-added.

Data Cleaning

- Performed schema validation to ensure consistency in categorical, temporal, and string fields.
- **Cleaned major inconsistencies:**
 - Standardized country and genre lists into multi-label formats.
 - Removed/treated null values in cast, director, date_added using appropriate imputation or filtered subsets.

Feature Engineering

- Constructed time-lag feature = year_added – release_year to quantify Netflix’s acquisition velocity.
- Expanded multi-value columns (genres, countries, cast) to analyze: Genre depth, Country-level diversity, Creator networks and influence

EDA

- Conducted wide-spectrum EDA covering:
 - Catalog composition (movies vs shows)
 - Genre distribution and multi-genre overlap
 - Country representation and regional dominance
 - Ratings distribution and audience targeting

Temporal Diagnosis

- Analyzed yearly growth trends to detect acceleration cycles tied to Netflix’s global rollout and originals expansion.
- Mapped monthly/seasonal patterns, revealing platforms’ scheduling logic (e.g., Q4 surge for holiday engagement).

Network & Contributor

- **Evaluated cast and director frequency to determine:**
 - Recurring contributors
 - Regional content hubs
 - Celebrity-driven impact clusters
- Built co-occurrence matrices to analyze collaborations across countries, genres, and creators.

Workflow

Strategy Mapping

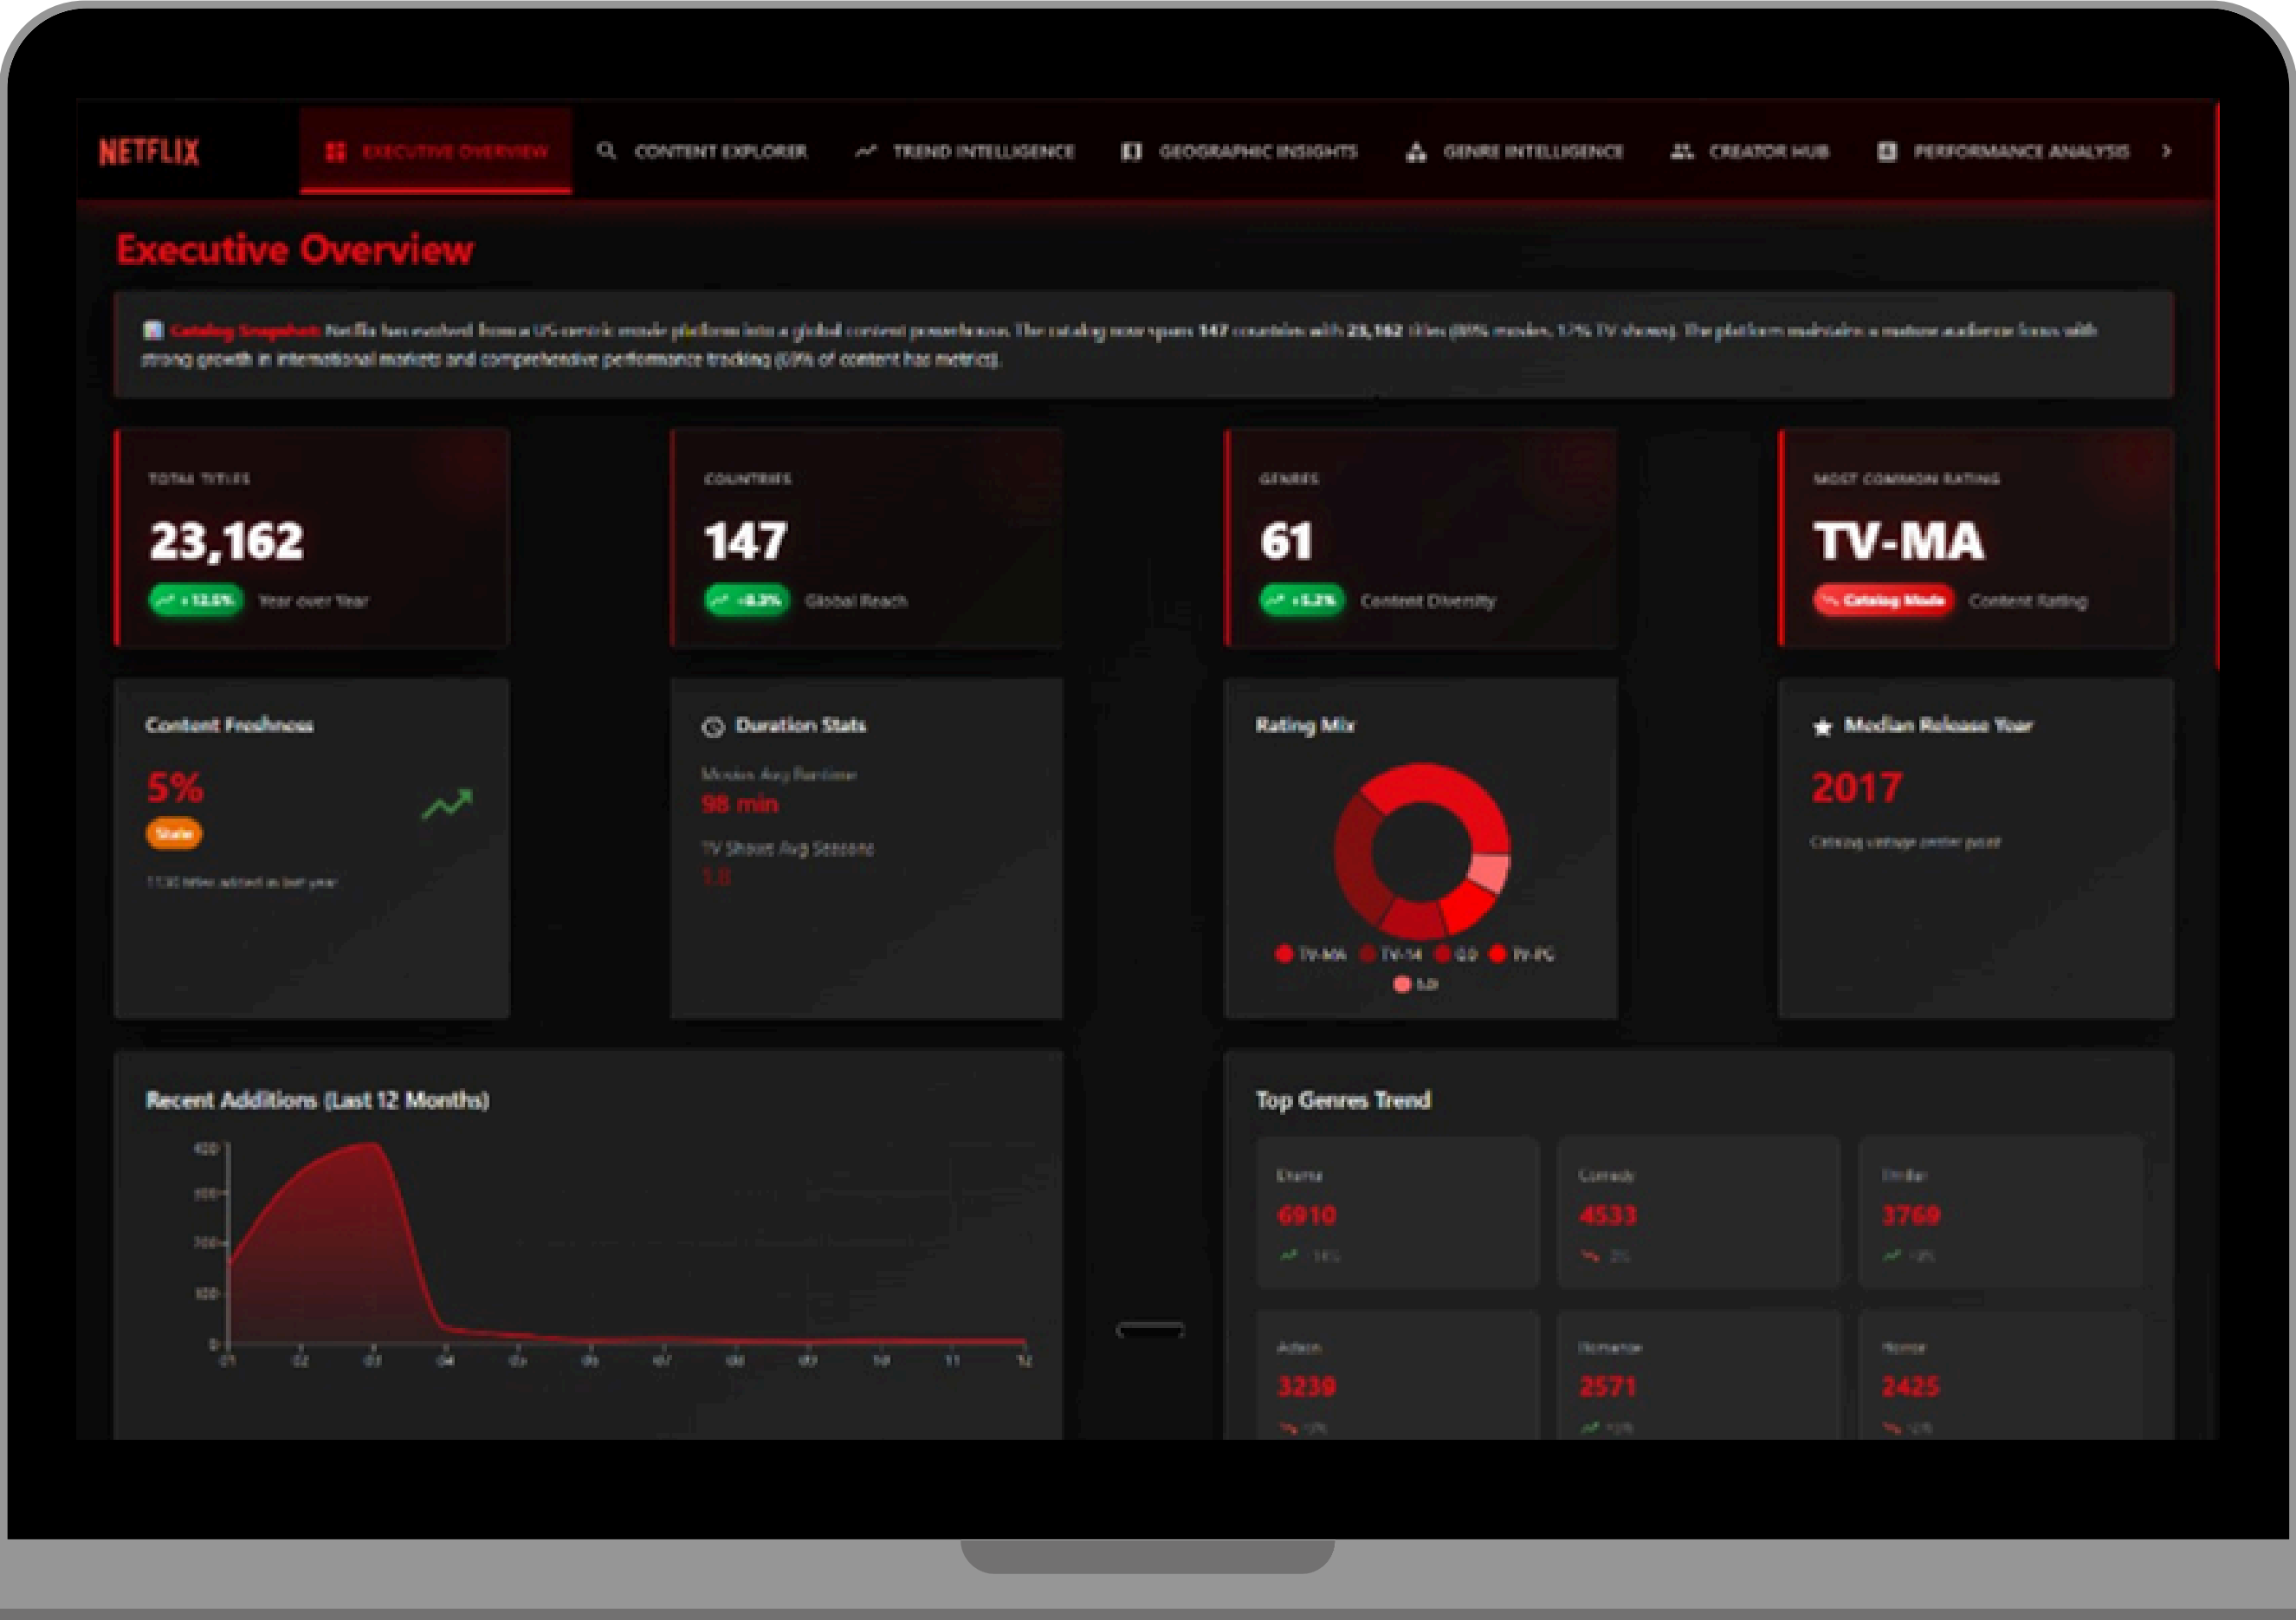

- Converted analytical patterns into strategic narratives explaining:
- Why Netflix shifted toward originals
 - Which regions became new growth engines
 - How addition timing aligns with consumer behavior cycles
 - How diversity and global talent shape catalog performance

KPI & KRI

- **Defined KPIs:** Yearly title additions, Original share growth, Time-lag reduction, Genre diversification index, Country representation score
- **Defined KRIs:** Over-reliance on specific regions (US, India), High variance in time-lag, Drop in licensed titles
